

Kishore R M

CMS Frontend Developer

kmuchintala02@gmail.com | +1 (518) 614-3857 | Dallas, TX | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Highly skilled AEM Content Developer with 6+ years of experience specializing in the end-to-end design, development, and publishing of scalable enterprise web applications. Expert at bridging the gap between complex backend architecture (Java, Spring Boot, Microservices) and dynamic, responsive front-end experiences (React.js, JavaScript, HTML5/CSS3). Proven track record of managing assets, metadata, and complex release plans within matrixed, Agile organizations. Adept at coordinating onshore/offshore resources to deliver bug-free, high-performance global e-commerce and CMS solutions.

TECHNICAL SKILLS

CMS Platforms: Adobe Experience Manager (AEM), Component & Template Development, Page Properties, Custom Workflows, Tagging & Metadata Management.

E-commerce & Operations: Global E-commerce Shopping Experience Development, Release Deliverables Tracking, Production Release Planning & Packaging

Front-end Technologies: React.js, Angular 17, TypeScript, Redux Toolkit, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Material-UI, AJAX, Webpack, [Node.js](#) (v18+)

Database Technologies: PostgreSQL, MySQL, MongoDB, DynamoDB, SQL Server, Oracle, Redis, Memcached, Apache Kafka, RabbitMQ, Apache Spark, Apache Airflow, Firebase, Cassandra

Back-end Technologies: Java 11,21, Spring Boot, Spring Cloud, Microservices, WebFlux, Hibernate, J2EE, JDBC, Spring Security, JDK, Micronaut, Node.js, Express.js, Python, ASP.NET, Flask, MVC Framework, SOAP, RESTful APIs, Maven, Bash Script, GraphQL, gRPC, WebSockets, API Gateway, OpenAPI, Event-Driven

Cloud and DevOps: AWS (Lambda, ECS, EKS, API Gateway, S3, RDS, DynamoDB, Cloudformation), Microsoft Azure (AKS, Functions), Docker, Kubernetes, Helm, Terraform, ArgoCD, GitHub Actions, GitLab, CI/CD, Jenkins, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, OpenTelemetry, Jaeger

Tools and Technologies: Git, Visual Studio Code, Log4j, JUnit, Mockito, Apache Maven, Guava, Nginx, Swagger, Postman, Apache Kafka, RabbitMQ, CI/CD, Linux, Scrum, Kanban, JIRA, Confluence, CI/CD Pipelines

PROFESSIONAL EXPERIENCE

Sr. Software Engineer, Royal Caribbean Group

Jun 2024 – Present | Remote, USA

- **Authored, updated, and published** high-impact digital content across enterprise **CMS platforms (AEM)**, leveraging structured **components, templates, and page properties** to maintain strict **brand consistency**.
- Managed lifecycle operations for digital assets, including **metadata, tags, links, and page properties**, optimizing the discoverability and structure of the **Content Management System**.
- Built dynamic, responsive web pages by seamlessly integrating front-end technologies (**HTML5, CSS3, JavaScript, and React**) within complex **CMS architectures**.
- Translated functional requirements and high-fidelity wireframes into responsive, cross-browser compatible web experiences using HTML5, CSS3, and JavaScript (ES6+).
- Resolved critical production issues by identifying and fixing multiple open HTML vulnerabilities and formatting bugs, ensuring seamless cross-browser rendering and zero downtime.
- Executed rigorous **content QA, proofreading, and automated link checks** prior to deployment, guaranteeing **data accuracy** and a **bug-free environment** across consumer-facing pages.
- Maintained a strong **attention to detail** during **content reviews**, ensuring all localized and global digital experiences aligned perfectly with organizational quality standards.
- Upheld strict governance, organizational values, and publishing **best practices** while successfully balancing aggressive **time-to-market pressures** and business objectives.
- Collaborated closely with cross-functional IT, design, and business teams in Agile/Scrum environments to gather requirements, groom backlogs, and deliver customer-centric technical designs.
- Strengthened system reliability and automated website rollouts by setting up end-to-end CI/CD pipelines with GitHub Actions, Jenkins, and Maven.
- Developed multiple reusable, highly configurable components backed by robust Java Sling Models, significantly enhancing content author flexibility and streamlining page orchestration.
- Leveraged Context-Aware Configurations to dynamically handle alert banner positioning and behaviors, tailoring the digital experience directly to localized author and business requirements. Also used HTL/Sightly to decouple content presentation from backend logic.
- Successfully modernized the enterprise backend by upgrading the codebase from Java 11 to Java 21, ensuring long-term support (LTS) compliance, enhanced security, and access to the latest API performance updates.

- Architected and developed a React-based promotional dashboard that streamlined the creation and management of multi-tier promotions, merchandising alerts, and perks.
- Empowered content authors to launch, configure, and activate complex marketing campaigns globally with intuitive, single-click workflows, significantly reducing time-to-market.
- Architected and developed a React-based promotional dashboard that interfaces with AEM source code via optimized GraphQL queries to streamline the creation of multi-tier promotions, perks, and merchandising alerts. Orchestrated the end-to-end setup of content, products, and media assets in **Online Store Publishing tools**, directly supporting engineering validation and multi-project testing phases.
- **Tracked, packaged, and deployed** enterprise-level project content to production environments in strict accordance with **complex release plans** and dependencies.
- Managed version control and codebase integration utilizing **GIT repositories**, mitigating environment conflicts across a multi-project and multi-platform portfolio.

Full Stack Developer, Center for Technology in Government

Jan 2023 – Dec 2023 | USA

- Designed and implemented a real-time, government-grade FEMA Message Design Dashboard (MDD) using Spring Boot microservices and ReactJS/Next.js 14, enabling secure and scalable emergency communication workflows.
- Engineered high-performance RESTful APIs with enterprise-level input validation, rate limiting, error recovery, and retry mechanisms, improving system resiliency and reducing downtime during peak loads.
- Built event-driven microservices using Apache Kafka with Schema Registry, ensuring schema evolution compatibility, strong data contracts, and fault-tolerant inter-service communication.
- Optimized PostgreSQL (RDS) through advanced query tuning, partitioning, materialized views, and database triggers to handle high-volume flight itinerary and historical event datasets.
- Developed serverless backend services with AWS Lambda and reusable Java/Python frameworks, cutting down development cycle time by 30% and improving performance under heavy workloads.
- Designed zero-trust security architecture by configuring AWS VPCs, IAM policies, Cognito User Pools, and Amplify integration, ensuring FISMA/NIST-level compliance and secure user authentication/authorization.
- Automated CI/CD pipelines with Jenkins, GitHub Actions, Docker, and CloudFormation, enabling blue-green deployments, automated rollbacks, and infrastructure as code (IaC) for consistent, auditable delivery.
- Deployed Kubernetes clusters with readiness/liveness probes, horizontal pod auto-scaling (HPA), resource quotas, and node affinity policies, delivering high availability and cost-optimized scaling.
- Designed and executed BDD-driven integration and regression testing with Cucumber, JUnit, and Mockito, embedding automated tests into CI/CD pipelines to increase release confidence.
- Conducted root cause analysis (RCA) using Grafana dashboards, Splunk distributed logging, AWS CloudWatch custom metrics, and JVM thread dumps, reducing mean-time-to-resolution (MTTR) by 40%.
- Implemented WCAG 2.1-compliant UI features with Tailwind CSS, ensuring accessibility via screen-reader compatibility, keyboard navigation, and responsive design across devices.
- Authored and maintained API documentation with Swagger/OpenAPI, expediting partner integration timelines and reducing developer onboarding time by 25%.
- Championed Agile delivery practices by collaborating in cross-functional teams, participating in sprint planning, backlog grooming, and code reviews, resulting in faster release cycles and higher code quality.

Sr. Software Engineer, ValueLabs LLC

Oct 2019 – Jul 2022 | India

- Architected and deployed 50+ high-performance RESTful APIs with Spring Boot, AWS Lambda, and API Gateway, enabling seamless service-to-service communication and reducing data processing latency across distributed systems.
- Designed microservices architecture and migration by leveraging Docker, Kubernetes, and service mesh patterns (Istio), ensuring high scalability, fault tolerance, and zero-downtime deployments.
- Directed frontend-backend integration by aligning ReactJS applications with Spring Boot services, applying SOLID and OOD principles, improving modularity and enabling future scalability.
- Modernized hybrid infrastructure by orchestrating AWS Cloud (Elastic Beanstalk, EC2, CloudFormation) with on-premises systems, improving deployment efficiency by 40% and reducing operational overhead.
- Established enterprise-grade security standards by integrating AWS Cognito, OAuth2.0, JWT, and 2FA, while enforcing role-based access controls (RBAC) to meet compliance and audit requirements.
- Enhanced delivery pipelines by designing end-to-end CI/CD workflows with Jenkins, GitHub Actions, and Maven, introducing automated testing, security scans, and containerized rollouts to accelerate releases.
- Optimized relational data stores (PostgreSQL, MySQL) through query tuning, indexing, sharding, and caching strategies (Redis, AWS ElastiCache), improving database performance under heavy workloads by 35%.
- Championed TDD/BDD practices using JUnit, Mockito, and Cucumber, achieving more than 90% test coverage and significantly reducing post-production defects.
- Implemented enterprise observability frameworks with AWS CloudWatch, ELK Stack, and Prometheus/Grafana, enabling predictive monitoring, real-time alerting, and proactive incident response.
- Integrated external systems and third-party APIs (payment gateways, notification systems, and analytics tools), extending core business functionality and reducing development overhead.

- Mentored junior engineers on Java, Spring Boot, React, and DevOps practices, driving knowledge-sharing sessions and improving overall team productivity.
- Led agile ceremonies (sprint planning, backlog grooming, and retrospectives), collaborated with product owners, and ensured on-time delivery of mission-critical features.
- Improved system resilience and scalability by implementing circuit breaker patterns, API throttling, and distributed caching, ensuring stable performance under peak loads.

EDUCATION

Master of Science , <i>University at Albany</i> Data Science	Aug 2022 - May 2024 New York, USA
Bachelor of Technology , <i>S R University</i> Electronics and Communication Engineering	Jun 2016 - May 2020 Telangana, India

CERTIFICATION

- **AWS Certified Cloud Practitioner**
